

Launching a successful e-business in today's fast-paced and competitive Internet landscape can require enormous capital resources and pose significant technical challenges.

The initial expense of Internet-related systems often consumes capital best used for core business concerns, such as application development and strategic marketing.

Additionally, e-companies must expertly manage the traditional suite of IT challenges, as well as those posed by Internet applications, system architecture, co-location and multiple vendor relationships.

Space4rent.com is your single solution that addresses all of these issues and more.

Our service level far exceeds that offered by Internet Service Providers (ISPs) and Hardware Service Providers (HSPs), who apparently decided to include system rental and managed services to fulfill a competitive requirement.

The experts at Space4rent.com will architect a system and managed service solution that will reduce your time to market, provide the highest level of customer service, protect your valuable information and preserve your precious resources.

At Space4rent.com, our only concern is your continued success.

About Space4rent.com

Space4rent.com serves as the only Internet e-business solution resource needed for all of your system management, availability, security, fault tolerance, storage and expansion requirements.

We tailor our professional and management services to address your unique business situation. These diversified services include:

- **System acquisition and design** – We acquire and design the ideal system for you based on your platform, security, performance, traffic, storage and expansion needs.
- **System test and burn-in** – We assemble, configure and test/burn-in your system, paying close attention to high availability features, including networking, CPU, applications and storage.
- **Pre-site verification** – We perform a pre-site inspection of the chosen co-location facility to ensure all power, cooling, network and space specifications are met.
- **System and network hardware installation** – We transport, install and configure your system and all necessary network hardware at the co-location facility, including servers, routers, VLANs, switches and Firewall.

“Business people must understand the technology architecture needed to implement the desired business model, and technologists must understand business architecture. How well this gap is bridged between business leaders and technologists will determine which companies will succeed in the next few years.”

e-enterprise: Where Are You Today? by Faisal Hogue, META Group Research

- **Operating system and application software installation** – We install your operating system software and applications, and update them with appropriate patches.
- **Security** – We audit your system for any security vulnerabilities using both scheduled monthly and random audits.
- **On-site monitoring** – We monitor your system and network performance 24 hours a day, seven days a week at the co-location facility, including CPU, disk and bandwidth utilization, network services, user/application processes and environmental issues.

Meet our staff of expert IT professionals and architects, many with backgrounds in large network operations such as AT&T, Qualcomm, MTI and IBM.

- **System backups** – We install, configure and tune Veritas NetBackup to provide a complete back-up of your system on a weekly basis.
- **Additional services** – We also provide other value-added services, including daily incremental back-ups, tape duplication, off-site tape storage, enhanced security, misuse detection, additional user level VPN accounts, additional DNS service—as well as consulting services for database design, network design, security implementation/risk assessment; and system/storage architecture.

With Space4rent on your side, you can remain focused on developing core business applications and building a strong Internet presence.

Our Expertise

At Space4rent, we recognize the challenges, time and capital involved in any successful Internet e-business. We realize you cannot afford to encounter server or hardware surprises that will affect your site's performance and risk customer loss.

Since we work with you to select, configure, install and monitor your system and network hardware, we are there for you through every phase of your e-business—and we won't drop the ball once your site goes live.

Space4rent offers numerous benefits over other Internet hosting and network management alternatives, including:

- **Convenience** – Space4rent's team of experts will help you choose and install the ideal server platform, hardware and tools—and then manage your system's security, storage, back-up and future expansion needs.
- **Superior Support** – Our IT professional staff monitors your server and network hardware at the co-location site 24 hours a day, seven days a week, and is available to assist you with any problem or question—without busy signals, multilevel call menus or voice mail messages.
- **Top-of-the-Line Products** – Strong partnerships with leading OEMs enable us to offer the latest technology and equipment to you at dramatically reduced rates. Our partners, including Sun Microsystems and IBM, work together with us to ensure the success of your Internet business.
- **Effortless Expansion** – We anticipate and support any rapid, unexpected or planned growth created by increased traffic to your e-commerce site—with minimal or no financial impact to you.
- **Controlled-Environment Equipment Locations** – Our servers and network equipment are stored in controlled environment co-locations that meet stringent temperature, cleanliness, security and safety requirements.

At Space4rent, our complete range of capabilities and unique approach to your e-business system requirements will bring you priceless peace of mind.
